239306 v1

Application No. 09/428,033 Filed: October 27, 1999

Marked-up Version of Claims

4. (Amended) A method [according to claim 1] of selecting wake-up slots for a plurality of radio frequency identification (RFID) tags which are simultaneously exposed to an interrogation field, each tag including an identification number, the method comprising:

(a) defining a transmission period comprising a plurality of consecutive tag transmission cycles, each transmission cycle including a plurality of discrete wake-up time slots; and

(b) during each transmission cycle, selecting a wake-up slot for each tag based upon a different grouping of consecutive bits of the tag identification numbers, the different grouping being dependent upon the transmission cycle number, wherein the bits which define the wake-up slot are inverted on odd transmission cycles.
